# SEBO AIRBELT K

**DESIGNED FOR CARPETS AND HARD FLOORS** – The AIRBELT K2 and K3 models are mid-size, powerful and lightweight canister vacuums featuring clever storage of three on-board attachments, easy bag changes, remarkably quiet operation, rubber-coated wheels to protect floor surfaces, a durable telescopic tube with quick-release connections, a full bag or clog warning light, and a soft bumper to protect the vacuum, furniture and walls from scuffs and scratches. The AIRBELT K3 model offers a commercial-quality power head, along with a hard-floor parquet brush. And its ergonomically designed handle, which also has a suction adjustment switch, provides user comfort and effortless control of the power head's 180° steering ability.

AIRBELT K3  
Red  
#9687AM

**A Flat-to-the-floor 3 1/4-inch Profile** – The power head's low profile makes cleaning under furniture and beds easy!

**Mid-size Canister Vacuum** – The AIRBELT K3 and K2 are considered mid-size canister vacuums, which means they are smaller, more compact machines. They offer one mid-size and two full-size on-board attachments, a .8-gallon filter bag, an operating range of 32 feet, and the K-model canisters weigh about four pounds less than SEBO's D4-model canister.

**Durable, Maneuverable and Technically Advanced Power Head** – The AIRBELT K3 comes standard with SEBO's ET-1 power head, which effectively cleans both carpets and hard floors. It is 12-inches wide and offers four-level manual brush height adjustment. Also, to clean delicate rugs and hard floors with straight-suction cleaning, the brush roller can be manually switched off. Its 180° steering ability provides amazing maneuverability. It also has easy brush removal, a handy clog removal door, and an orange warning light with automatic shut off for brush roller obstructions. The warning light also remains illuminated during use when brush height is set too high for optimal cleaning or when the brush roller should be replaced due to reaching maximum bristle wear.

## AIRBELT K3

### Suction Adjustment Switch on Handle –

The vacuum's suction power can be adjusted from 0 to 1,250 watts by a slider switch conveniently located on the handle of the K3, providing convenient suction control for normal to more delicate cleaning tasks.

### Three On-board Tools –

The SEBO AIRBELT K3 models come standard with a crevice tool, dusting brush and upholstery nozzle. Also, many optional attachments are available that can be fitted to the telescopic tube or the hose handle.

### Large Operating Range –

A 32-foot operating range, with a 20-foot cord, saves time because it minimizes the number of electrical outlets needed during use.

### Tug and Retract Cord Rewinder –

The AIRBELT K models offer a "tug and retract" cord rewriter, instead of a control switch cord rewriter, which is offered on the AIRBELT D4 model.

### Full Bag or Clog Light –

When a full bag, a clog in the airflow pathway, or an excessively dirty microfilter is detected, an orange warning light, next to the green "on light," on the canister body illuminates and an airflow bypass valve opens. This feature prevents overheating and motor damage from a lack of adequate airflow.

### Protective Rubber-coated Wheels –

SEBO's wheels protect all floor surfaces and provide smooth maneuverability.

### Personalized Vacuums –

The K-series AIRBELT bumper can be personalized with any of these colorful textile covers:

## AIRBELT K2

The two SEBO AIRBELT K2 models are straight-suction vacuums. Thus, they differ from the AIRBELT K3 as follows:

### Turbo Brush or Kombi Nozzle, But No Power Head –

The AIRBELT K2 models have telescopic tubes and hoses without power cords, so they do not accommodate electric power heads. Instead, the K2 Hunter Green comes with an air-driven turbo brush for cleaning carpet and a parquet brush (as with the K3) for cleaning hard floors. The K2 Midnight Blue comes with one cleaning head, the Kombi Nozzle, for use on hard floors and rugs.

### Suction Adjustment Switch on Canister Body –

Because the AIRBELT K2 has a hose and handle without a power cord, its suction adjustment switch is located on the canister body, not the handle.

## ATTACHMENTS

		ET-1 Power Head included with K3 model vacuum. Colors: Onyx (shown), Red and Orange

## BAGS, FILTERS & ACCESSORIES

		*All three items are also available as a Service Box #6695AM, containing 8 Filter Bags, an Exhaust Filter and a Pre-motor Microfilter.		

**Designed and Manufactured in Germany** – Legendary quality, reliability and performance make SEBO vacuums the choice of cleaning professionals throughout the world.

**Excellent for Users With Allergies or Asthma** – The British Allergy Foundation recommends SEBO filters.

**Tightly Sealed Vacuums Ensure Effective Filtration** – Dirty air, which flows through a vacuum, can only be filtered completely if it does not escape into the room through seams or seals in the machine. This is why all SEBO vacuums have tight seals throughout.

Many vacuum companies with high-filtration claims are actually quoting specifications made by the manufacturer of the filter material, as measured in the laboratory, not the filtration effectiveness of the vacuum itself while operating. Whether or not dirty air can escape through leaks in the body of the machine is not considered. The filtration effectiveness of SEBO vacuums is tested while they operate.

**Save Money! SEBO Vacuums Last for Years and Extend Carpet Life!** – If properly maintained, SEBO vacuums save ordinary residential users hundreds of dollars by providing excellent performance for ten to fifteen years or more, and their deep-cleaning power-brush technology extends the life of carpets. Typical vacuums perform poorly, even when new, and usually do not last beyond two years. So six or seven “disposable vacuums” must be purchased during the average life expectancy of just one SEBO machine.

**Five-year Warranty Coverage** – All SEBO models include a five-year warranty on the motor and all non-wear parts and a five-year warranty on labor charges.

**SEBO Microfilters Ensure Continuously Strong Suction Performance** – They are also long lasting, inexpensive and easy to change in seconds.

**Changing Bags is Easy and Clean** – SEBO filter bags can be changed in just a few seconds, and a cap keeps dust sealed inside during removal and disposal.

**Effective Pet Hair Removal** – All SEBO vacuums easily remove pet hair!

## AIRBELT K TECHNICAL DATA:

- Motors: 1450 watts total.
- Canister – 1250 watts,
- ET-1 Power Head, 175 watts,
- ET-2 Power Head, 200 watts.
- Body Weight - 12 lbs. (without power head).
- Water Lift - 110 inches
- Airflow - 120 CFM
- Sound Level - 63 dB A

## SEBO's THREE-STEP FILTRATION SYSTEM:

**Step One. Bags are Better!** – Top-fill, three and four-layer bags are an integral part of SEBO's filtration system because they hold virtually all dirt captured by the vacuum, which improves the effectiveness and useful life of the microfilters. They also ensure continuously strong suction because dirt enters from the top, deposits at the bottom, accumulates upward, and air exits through the sides, which allows unimpeded airflow as they fill to capacity. And they can be sealed when full, so no dust can escape into the air during bag removal and disposal.

In contrast, without bags to hold nearly all the captured dirt, the microfilters on bagless vacuums quickly clog from excessive dirt build-up and must be replaced often, or a loss of suction and cleaning effectiveness will occur.

In addition, dust and other allergens become airborne when emptying bagless dirt containers. Lastly, bagless vacuum microfilters are expensive, usually costing more than a multi-year supply of SEBO filter bags.

**Step Two. S-class Pre-motor Microfilters** – S-class Pre-motor Microfilters (S = “Schwebstoff” = airborne particles) are made from electrostatically charged micro-fiber material, which attracts and captures dust particles from the airflow of the vacuum before it passes over the motor to cool it. Cooling the motor with super-clean air increases motor life and reduces the possibility of maintenance, even after many years of use. The S-class Standard requires filters to absorb greater than 99.9% of particles down to 0.3 microns in diameter. For comparison, 100 microns is the diameter of a human hair. Their advantages are a relatively open texture that allows smoother airflow for better suction performance, a longer life expectancy, and they cost less than HEPA filters.

**Step Two. HEPA Pre-motor Microfilters (Optional)** – HEPA Pre-motor Microfilters (“High Efficiency Particulate Air”) remove a minimum of 99.97% of all airborne particulate matter down to 0.3 microns in diameter. Because these filters use small grid-like structures to capture dust particles, dirt build-up clogs the airflow pathway sooner than what is expected from S-class microfilters. However, SEBO's HEPA microfilters are sold along with four-layer “Ultra-bags,” which provide highly effective filtration before the airflow goes through the HEPA microfilter, greatly increasing life expectancy and reducing the potential of diminished air flow.

**Step Three. Exhaust Filter** – The exhaust filter cleans the air emitted by the vacuum motor.
