SEBO ELECTRONIC 370

DESIGNED FOR CARPETS – The heavy-duty ELECTRONIC 370, a two-motor vacuum with separate suction and brush motors, is SEBO's quietest upright vacuum! It is designed to provide many years of trouble-free operation and features an aggressive power head with manual brush height adjustment and a convenient instant-use cleaning wand and suction hose. In addition, the vacuum features an electronic controller that not only alerts the user to problems such as clogs, a worn brush, a full bag, brush obstructions, and when brush height is set too high for optimum cleaning, but it also automatically shuts off the brush roller when it is jammed to protect the motor and belt from damage. This is a perfect vacuum for large carpeted areas.

Instant-use Wand and Suction Hose – The integrated instant-use wand and suction hose are always ready. Just pull out either tool, or both together, to clean hard-to-reach corners, edges and crevices. The wand and hose together have an eight-foot reach. The suction hose is ideal for cleaning furniture. And an optional nine-foot extension hose is available, which creates a total hose length of 15 feet . . . perfect for cleaning stairs. Choose from a range of optional attachments that can be fitted to the wand or hose!

A Flat-to-the-floor 5 ½-inch Profile – Its low profile makes cleaning under furniture and beds easy!

ELECTRONIC
370 Gray
#9703AM

Four-level Manual Brush Height Adjustment – The brush height can be manually adjusted up or down for optimal cleaning effectiveness.

Brush Obstruction Light with Automatic Brush Shut Off –

If an obstruction jams the brush roller, an orange warning light on the power head illuminates, and the brush roller immediately stops spinning. This prevents the belt from breaking and protects the motor and carpet from damage.

Incorrect Height Setting or Worn Brush Light – When the brush height is set too high for optimal cleaning or when the brush strip should be replaced due to wear, an orange warning light, next to the green “on light,” remains illuminated during use. (The vacuum will not automatically shut off.) The light shuts off when the condition is corrected, ensuring consistently effective brush agitation of the carpet pile.

Easy Brush Strip Removal and Cleaning – Cleaning hair or debris from the brush strip or replacing it when the bristles are worn is quick and easy. This feature ensures consistently effective brush agitation of the carpet pile. The ELECTRONIC 370 has a brush roller with a replaceable brush strip. This is part of its heavy-duty sealed brushing mechanism, which provides extra rugged durability.

Two-motor Design. Automatic Brush Shut Off During Stationary Use – The ELECTRONIC 370 vacuum operates using two motors: a 1,000-watt motor for suction and a 150-watt motor to power the brush roller. Thus, when the handle is in the upright locked position, the vacuum’s brush roller automatically shuts off, but suction remains on, so stationary cleaning using the wand and/or hose can be done for an extended period of time.

Full Bag or Clog Warning Light – When a full bag, a clog in the airflow pathway, or an excessively dirty microfilter is detected, a red warning light on the bag housing illuminates and an airflow bypass valve opens. This feature prevents overheating and motor damage from a lack of adequate airflow.

Durable Heavy-duty Belts – The reinforced toothed belts do not slip or stretch, resulting in a more efficient use of power, and they should last the life of the machine.

Wide Power Head with One-sided Edge Cleaning – The 14-inch wide power head with a 12 1/2-inch cleaning path is perfect for larger homes, and its L-shape provides excellent maneuverability around furniture and under cabinets. The extension side of the head cleans to the edge.

Three On-board Full-size Tools. Large Filter Bag – The ELECTRONIC 370 comes standard with a crevice tool, dusting brush, upholstery nozzle, and a large 1.4-gallon filter bag. Also, many optional accessories are available.

Thirty Nine-foot Cord – A 39-foot cord saves time, by reducing the number of electrical outlet changes needed during use.

Combination Carrying Handle with Rotating Cord Hook – The vacuum is easy to carry, or quickly unwind the cord, using its unique handle with integrated rotating cord hook.

ATTACHMENTS

Included			
	Crevice Tool #1092DG	Dusting Brush #1387DG	Upholstery Nozzle #1491DG
Optional			
	Radiator Brush #1496DG	Flat Upholstery Nozzle #1090HG	Wall & Floor Brush #1325HG
	Hand-held Turbo Brush #6179DA	20" Extension Wand* #1084HG	9-Foot Extension Hose* #1495AM
Optional Kit			
	Parquet Brush* #1359DG	Parquet Brush* #1359DG	Parquet Brush* #1359DG

*All three items are available individually or as a three-piece attachment kit, #1991AM.

BAGS, FILTERS & ACCESSORIES

10 Filter Bags #5093AM	Exhaust Filter #1878	Electrostatic Microfilter #1875	Alternative Motor Filter #1825
370 Brush Strip #2046	SEBO FRESH 1 Pkg. of 5 #0496AM	SEBO FRESH 1 Pkg. of 5 #0496AM	SEBO FRESH 1 Pkg. of 5 #0496AM

Designed and Manufactured in Germany – Legendary quality, reliability and performance make SEBO vacuums the choice of cleaning professionals and household users throughout the world.

Save Money! SEBO's Last for Years and Extend Carpet Life! – If properly maintained, SEBO vacuums save ordinary residential users hundreds of dollars by providing excellent performance for ten to fifteen years or more, and their deep-cleaning power-brush technology extends the life of carpets. Typical vacuums perform poorly, even when new, and usually do not last beyond two years. So six or seven "disposable vacuums" must be purchased during the average life expectancy of just one SEBO machine.

Five-year Warranty Coverage – All SEBO models include a five-year warranty on the motor and all non-wear parts and a five-year warranty on labor charges. The AUTOMATIC X vacuums include a lifetime warranty on the belts.

Effective Pet Hair Removal – All SEBO vacuums easily remove pet hair!

Remarkably Quiet Operation – Intelligent design and high-quality motors combine to provide amazingly quiet vacuums.

Protective Rubber-coated Wheels – SEBO's wheels protect all floor surfaces and provide smooth maneuverability.

Changing Bags is Easy and Clean – SEBO bags take just a few seconds to change, and a cap keeps dust sealed inside.

SEBO Microfilters Ensure Continuously Strong Suction Performance – They are also long lasting, inexpensive and easy to change in seconds. Choose S-class or HEPA filters . . . either type of filtration is an excellent choice!

Effective Filtration Requires a Tightly Sealed Vacuum – Dirty air, which flows through a vacuum, can only be filtered completely if it does not escape into the room through seams or seals in the machine. This is why all SEBO vacuums have tight seals throughout.

Many vacuum companies with high-filtration claims are actually quoting specifications made by the manufacturer of the filter material, as measured in the laboratory, not the filtration effectiveness of the vacuum itself while operating. Whether or not dirty air can escape through leaks in the body of the machine is not considered. The filtration effectiveness of SEBO vacuums is tested while they operate.

Both S-class and HEPA Filters are Available – S-class filters come standard on all SEBO vacuums, and HEPA filters are an option available for most models. They both remove 99.97% of particles down to 0.3 microns in size and 100% of particles of one micron and above. For comparison, 100 microns is the diameter of a human hair.

Excellent for Users With Allergies or Asthma – The British Allergy Foundation recommends SEBO filters.

SEBO's THREE-STEP FILTRATION SYSTEM:

Step One. Bags are Better! – Top-fill, three and four-layer bags are an integral part of SEBO's filtration system because they hold virtually all dirt captured by the vacuum, which improves the effectiveness and useful life of the microfilters. They also ensure continuously strong suction because dirt enters from the top, deposits at the bottom, accumulates upward, and air exits through the sides, which allows unimpeded airflow as they fill to capacity. And they can be sealed when full, so no dust can escape into the air during disposal.

In contrast, without bags to hold nearly all the captured dirt, the microfilters on bagless vacuums quickly clog from excessive dirt build-up and must be replaced often or a loss of suction and cleaning effectiveness will occur. In addition, dust and other allergens become airborne when emptying the bagless dirt containers. Lastly, bagless vacuum microfilters are expensive, usually costing more than a multi-year supply of SEBO filter bags.

Step Two. S-class Microfilters – S-class (S = "Schwebstoff" = airborne particles) filters are made from electrostatically charged micro-fiber material, which attracts and captures dust particles from the airflow of the vacuum. The S-class Standard requires filters to absorb greater than 99.9% of particles down to 0.3 microns in diameter. Their advantages are a relatively open texture that allows smoother airflow for better suction performance, a long-lasting life expectancy, and they typically cost less than HEPA filters. A charcoal S-class microfilter, designed for odor absorption, is also available for most models.

Step Two. HEPA Microfilters (Optional) – HEPA ("High Efficiency Particulate Air") filters remove a minimum of 99.97% of all airborne particulate matter down to 0.3 microns in diameter. Because these filters use small grid-like structures to capture dust particles, dirt build-up clogs the airflow pathway sooner than what is expected from S-class filters. However, SEBO's HEPA filters are sold along with four-layer "Ultra-bags," which provide highly effective filtration before the airflow goes through the HEPA filter, greatly increasing its life expectancy and reducing the potential for diminished air flow from blockages of the filter material.

Step Three. Exhaust Filter – The exhaust filter cleans the air emitted by the vacuum motor.
